RE: Docket #12-338

I am an Amateur Extra class licensee and respectfully urge the Commission to adopt the proposed reallocation of the 1900-2000 kHz segment to the amateur service on a primary basis, as detailed in this proceeding. With the widespread use of GPS technology in today's society for the navigation of cars, boats/ships, planes and many other uses, there is no longer a need for the aforementioned spectrum for radio location. Making this spectrum primary for the Amateur Radio Service recognizes an inherent value to public service and emergency communication that overshadows any interest in giving unused radio location services priority.

I also respectfully urge the Commission to adopt the new allocation at 137 KHz for the Amateur Radio Service. An allocation at 137 KHz. opens up the possibility for new forms of experimentation using a part of the spectrum otherwise unknown to Amateurs since the very early days of radio.

Sincerely,

David L Compton
